

## Overweight Container Guidelines for US Inland Transportation

Overweight containers have additional costs of transportation via Rail & Truck

Here is a guidance on what is considered as an overweight container for inland transportation via truck and/or rail movement. Note, the following weights are Total Combined Weight of cargo payload and container. Inland transport overweight additional charges apply when the cargo is within the specified limits.

The surcharge rates can be found in our Tariff as well as can be referenced in the USA Local Charges/ Service Fees [here](#).

**All weights are in Metric Tons**
