

Guatemala: Inland Emergency Fuel Surcharge

Due to ongoing volatility in international energy markets, diesel prices have experienced increased fluctuations. As diesel represents a significant cost component of inland transportation and handling, we will introduce an Inland Fuel Floater (Diesel) for applicable inland services in our market. It will be designated with the code Emergency Fuel Origin (**EFO**) / Emergency Fuel Destination (**EFD**).

- Applicable to Export / Import Inland Haulage from / to all ports of Guatemala
- Effective April 1, 2026, for all trades except shipments subject to FMC, which will be valid from May 1, 2026
- Charge Level: 14% on truck transport
- Equipment: all container types

Should you have any questions, please do not hesitate to contact your local Hapag-Lloyd representative.

Best regards,

Hapag Lloyd AG Guatemala
