

## **Introduction of Emergency Fuel / Energy Surcharges (Inland)**

May 8, 2026

Dear customer,

At Hapag-Lloyd, we continuously strive to keep your inland logistics reliable, transparent, and efficient.

Due to ongoing volatility in international energy markets, diesel prices have experienced increased fluctuations. As diesel represents a significant cost component of inland transportation and handling, we are adjusting the Inland Fuel Floater (Diesel) for applicable inland services in our market.

The following Inland Fuel Floater (Diesel) will apply:

- Fuel Origin / Destination Inland (FOI / FDI): Export / Import Inland Haulage from / to Morocco
- Effective May 8<sup>th</sup> 2026 for all trades except shipments subject to FMC, which will be valid from June 8<sup>th</sup> 2026
- Charge Level: 15% on TRUCK transports
- Equipment: All container types

Should you have any questions, please do not hesitate to contact your local Hapag-Lloyd representative.

Kind regards,  
Hapag-Lloyd Morocco
